The company was founded in 2008.

It specializes in the production of dry mixtures for ice cream.

The mixtures are made from whole milk powder, natural sugar, high-quality cocoa beans. TM "Vanilino" does not use sugar substitutes or dyes. The fat content of the mixtures is 17-21%. In the process of mixtures manufacturing, the company sticks to Italian recipes and technologies.

At the production site there is a constant quality control.

The success of the company is evidenced by the wide network of customers and the recognition of foreign colleagues. The company has created one of the largest networks in the soft ice cream production and sale — more than 60 ice cream stores are working in many cities of Ukraine.

Shpola Food Products Plant is an enterprise that specializes in the manufacturing of different food products under the trademarks "Zhaivir", "Zolotysti chips" and "Hrustata Potata".

TM "Zolotysti chips" is in the Ukrainian market for 30 years. Under this brand the lamellar chips are made from mashed potatoes and then fried till crispy golden crust in real sunflower oil. Thanks to the high requirements for raw materials, a large number of potatoes in the chips composition, a unique way of frying and a carefully selected flavor line these potato chips have won the love of consumers.

TM "Zhaivir" is engaged in the production of both classic oriental sweets and stevia sweets — a special line of delicacies, which is carefully created for those who do not consume sugar. The company offers a wide range of products which includes caramelized seeds and nuts bars (kozinaki), various types of classic toffee candies, fragrant classic and nut halva, airy crispy brittle candies made of rice or popcorn, healthy and nutritious nut bars "Like". There also is a separate line of various delicious sweets with stevia — for those who don't eat sugar.

TM "Hrustata Potata" is the youngest brand of the plant, under which the crispy figured snacks are produced. The Hrustata Potata is bright not only on the outside — inside of each pack with individual taste there are snacks of different shapes.

The company has a quality control system ISO 22000, its own production laboratory of control and quality. The company has the Halal certificate for the TM "Zhaivir".

BEEHIVE

STANDARD

BEEHIVE enterprise is the largest honey processing plant in Ukraine with its own high-tech laboratory. We buy honey of different varieties (acacia, buckwheat, sunflower, lime, mixed herbal) from 9 regions of Ukraine.

A team of highly qualified chemists and analysts carefully controls the quality of honey in our own laboratory. It has the most modern equipment and a chromatograph that can detect 74 different types of antibiotics.

Our plant is 5000 m² of production capacity. Daily production capacity is 40 tons of ready products. Our packaging line is capable of producing 2,000 cans per hour.

We offer 5 varieties of honey for export: acacia, buckwheat, white honey, sunflower and mixed herbal. All products are thoroughly tested at different stages of production. The quality of honey BEEHIVE complies with international standards (certificates FSSC 22000 V. 4.1, Halal, Organic and now receives a certificate of True Source).

Today, the company is successfully exporting honey to European, North American and MENA countries. The honey is exported in 20 liter barrels.

The "Confectionery factory" Mercury "

The "Confectionery factory "Mercury" Ltd was founded in 1990. In 1999 the production of the lollipops under the trademark "ROKS" was started.

During its existence the factory grew up in a large enterprise with a wide range of products. At the beginning of 2017 a new building of the factory with an area of 6,000 m² was completed and new powerful lines for the production of hard candy products were put into operation. The modernization allowed to increase the capacity and energy efficiency of the factory. In September 2017 the enterprise was certified according to the international food and quality management system for food products — the IFS Food Version 6.1 and BRCGS — Global Standard for Food Safety Issue 9 and Halal Food. This demonstrates the high quality of our products and allowed us to increase the export turnover.

Only natural ingredients are used for the production of lollipops. So the sweets of the TM "ROKS" are safe for the consumers.

The candies made from sweeteners — sorbitol and isomalt — are also offered. These items are intended for people with diabetes and people who control their weight. The excellent taste of the "ROKS" candies is a result of the usage of natural fruit and berry flavours.

macfито

“MacCoffee”, the group’s leading brand, consistently holds a leading position in the 3-in-1 instant coffee segment in the group’s main markets, including Ukraine.

The LLC “FES UKR”, together with “MacCoffee” brand, have won the “The choice of the country 2020” award and joined the list of the best Ukrainian companies.

MacCoffee Cappuccino Di Torino is a special drink made according to a unique recipe: a combination of strong espresso with whipped cream and chocolate topping will win the hearts of true gourmets.

The TM “Hillway” is for true connoisseurs of the highest quality tea.

The Hillway tea collection allows every tea lover to make an excellent choice as it includes a full palette of blends of black and green tea both loose leaf and finely cut varieties. It allows you to enjoy the quality and freshness of a traditional Ceylon drink every day, at the same time wondering at the new flavors of Hillway: combination of black tea with pieces of fruit and berries, green tea with jasmine flavour.

Kracks are real potato chips. However, even frying of curved plates without extra oil, and convenient and practical packaging make them different.

Tazzanera is one of the best coffee brands. Every sip of this coffee has a wonderful taste and a magical aroma from the very heart of Italy.

Since 2013, the enterprise has implemented an integrated food quality and safety management system, which is constantly improved by complying with international and national standards ISO:9001 and ISO:22000. The company’s products have a certificate of conformity in the UkrSEPRO voluntary certification system and a “Halal” certificate.

У УМАНЬ ПИВО 1878

"Umanpyvo" brewery is one of the oldest and largest breweries in Ukraine. It was founded in 1878. It produces:

- beer,
- cider,
- kvass,
- lemonade.

The "Umanpyvo" brewery manufactures products under the following product ranges: beers "Umanske", "Waissburg" which is produced according to the German recipes, "Sofiivske", craft beers, "Umanskyi Cider", "Umanskyi Kvass" and "Umanskyi lemonade".

The company produces organic beer in accordance with the Bavarian Beer Purity Law dated 1516: only water, malt and hops. It does not use any malt substitutes in its beer production process.

Combining the ancient traditions and the latest technologies, the brewers from Uman work hard every day to brew the best beer from natural raw materials. Thanks to cooperation with German brewing experts, the company's technologists are constantly improving their craft in order to surprise the consumer with the outstanding taste of natural beer.

The peculiarity of the "Umanpyvo" company is that the raw materials for beer production are grown on the enterprise's own fields and the honey, used for making of the honey beer, is collected from the carefully maintained apiaries. Connoisseurs of the company's drinks can be sure of the highest quality, naturalness and organic origin of the "Umanpyvo" products as well as utilization of solar energy for production of the drinks.

LLC "Combine of Cracknels" is a Ukrainian manufacturer of cracknels, gingerbread, confectionery, oatmeal cookies and sweet straw.

LLC "Combine of Cracknels" is a powerful and modern industrial complex, with many years of experience and rich history, located in the center of Ukraine, in Bahacheve town, Cherkasy region.

Donuts and gingerbread products, oatmeal cookies and sweet and salty straw are produced under the trademark "BCC" (Bakery and Confectionary Complex) and have long storage periods (from 4 to 6 months).

Confectionery, cakes and biscuits are produced under the brand name "Charivnytsia" using the technology of products shock freezing. The advantage of this technology is that it allows you to freeze cakes at -30°C (further storage at -18°C). This allows to:

- increase the storage period without loss of product quality;
- produce confectionery and cakes without the use of preservatives;
- reduce logistics costs, etc.

All stages of production, starting from the input control of raw materials and ending with the loading of ready products are controlled by their own certified laboratory. Special recipes, modern equipment, usage of natural ingredients, responsibility and work experience of the employees allow to produce high quality products that have been highly appreciated not only by Ukrainian customers but also by customers from Germany, Greece, Israel, Moldova, the USA, Canada, Georgia, Australia, etc.

ОВОЧІ ТА ФРУКТИ

LLC "Moshuriv cannery" is an innovative enterprise, food production facility, which specializes in the production of the following product groups: canned vegetables, vegetable juices, frozen products (pancakes, pelmeni (type of ravioli), drinking water, milk and dairy products, dried vegetables and fruit. The staff of the plant are professional and carefully selected. They understand export market requirements and have years of experience in exporting products to CIS, European, American and Asian countries.

Here is a short list of products and product groups offered by LLC "Moshuriv cannery":

1. Canned vegetables which are sold under "Smachno! (Delicious!)" trademark — a culinary masterpiece produced according to the rural recipes. They can't be found on the open market but they are really delicious.
2. Frozen products, which are sold under "Smachno! (Delicious!)" trademark are made from high-quality milk. There are also real fruit pieces in the desserts.
3. Bottled drinking water produced there — purified natural drinking water that rises from the depth of 98 meters.
4. Dried fruit and vegetables in convenient consumer containers are the new products in the product range. Their process of drying allows preserving high quality of the gifts of fertile Ukrainian land without using high temperatures of sterilization.
5. Dairy products are produced on a comparatively small home factory but this doesn't prevent them from being one of the most popular products in the company's product range. These are high quality products produced in small amounts.

The company "Organic Farming Product" is a beef producer in Ukraine.

"Organic Farming Product" was founded by leading Ukrainian specialists in the field of cattle breeding. The company has a closed production cycle, where everything starts with the control of livestock genetics and ends with the proper maturation of the meat.

The company has its own ABERDEEN ANGUS bull farm. The herd numbers more than 1000 heads. Ideal conditions have been created for animals.

Qualified specialists of "Organic Farming Product" thoroughly do their work: they always keep cattle clean and comfortable and protect them from stress.

The products of "Original Farming Product" is, first and foremost, safe meat that has been grown under close veterinary supervision and passed all stages of control. Unsurpassed taste and soft structure are a result of genetics, proper grain fattening and compliance with generally accepted fermentation standards.

“Koniushyna” is a craft honey company, which has been engaged in bee-keeping for over 4 generations. The company collects high quality honey at their own apiary and makes natural honey sweets.

The company's product range includes:

- pure selection honey — acacia, forest, sunflower, linden honey;
- cream honey (7 flavours);
- flavoured cream honey in stick packs;
- nuts with honey;
- mix of seeds and dried fruits with honey;
- natural wax candles;
- gift sets.

Their products are sold in retail chains across Ukraine.

Conveying knowledge from generation to generation, “Koniushyna” preserves the main values — product quality and care for a bee. Therefore it produces only 100 % natural products, without any dyes, preservatives or added sugar. By using raw materials collected directly from their own family apiaries in production, the company is able to manage product quality from the initial bee stage through to the finished product.

The company “Koniushyna” accepts corporate orders for unique gift sets and makes their branding and individual packaging, according to the customer's request.

LLC "Uman Fruit Company" is a family company that was founded in 2016. In 2017 the first 10 hectares of the orchard were laid, and today the company has 23 ha of modern fast-growing cherry orchard, with a total number of nearly 35 thousand trees in it.

Successfully selected sorts of sweet cherry, Dutch and Belgian seedlings, an irrigation system, a modern trellis system with concrete pillars under a hail protection net and a rain film allow the company to conduct a successful business.

The assortment of products sold under the "GORDIY GARDEN" brand consists of medium, mid-late and late export-oriented sweet cherry breeds of German, Czech, English and Canadian selection.

Own apiary, as well as bumblebees and osmiums, are one of the components of obtaining a good harvest.

Advanced technologies together with European experience allow to grow sweet cherries of high quality.

The nearest plans are to expand the area of plantations up to 40 hectares.

The enterprise is certified according to the international safety and quality standard GLOBALG.A.P.

Kaniv butter and cheese plant was built in 1971. The plant is located in an ecologically clean region — Cherkasy region, Kaniv city. The history of the factory lasts more than 50 years. The factory produces hard and semi-hard cheeses, butter of various fat contents and dry whey under two trademarks: “CHEESE CLUB” and “KANIV”.

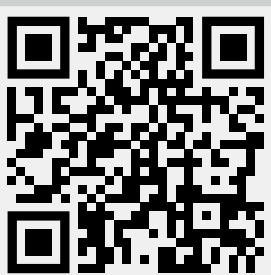

For the production of cheeses, the production lines are equipped with the latest technology and are considered one of the best in Ukraine. Kaniv butter and cheese plant is a high-tech facility with a full production cycle, equipped with modern, efficient equipment for milk processing and cheese production, including Siemens, Obran, Sealed Air, and Alfa Laval.

The plant has implemented quality control systems, which are certified by international ISO and HACCP certificates.

“CHEESE CLUB” is a recognizable brand with a rich history, under which cheeses unique in taste and recipe are produced, from classic to original aged ones. The “CHEESE CLUB” assortment includes more than 20 types of cheese in various formats.

“KANIV” is a relatively young brand that is gaining popularity due to the high quality of traditional sorts and varieties with original additions.

The plant's cheeses are exported to Moldova, Kazakhstan, Israel, the USA and other countries.

Seed Corp is a Ukrainian division of the American company Remington Seeds, which grows corn hybrids for foreign and domestic companies.

For today Seed Corp has more than 200 employees and fully controls the production process of seeds growing: field production, refining and air-conditioning at a modern seed plant.

The production capacities of the plant allow to dry 22 thousand tons of corn in cobs per season and calibrate 750 thousand sowing units of corn. Besides this, the plant may calibrate 200 thousand sowing units of sunflower and 10 thousand sowing units of soybeans, wheat, barley and other crops.

All innovations of the company Seed Corp are aimed at the production of high quality seeds. Seed Corp annually increases the area of irrigated land for hybridization plots, because a sufficient amount of moisture is necessary both for the quality of seed and its yield.

Highly motivated, professional and responsible team of Seed Corp consists of qualified specialists, who withstand the challenges of nature, meet them, collect rich yields and achieve high results.

Private agricultural enterprise "Lider" was founded in 2001. The company has been steadily operating, expanding its crop cultivation and animal husbandry.

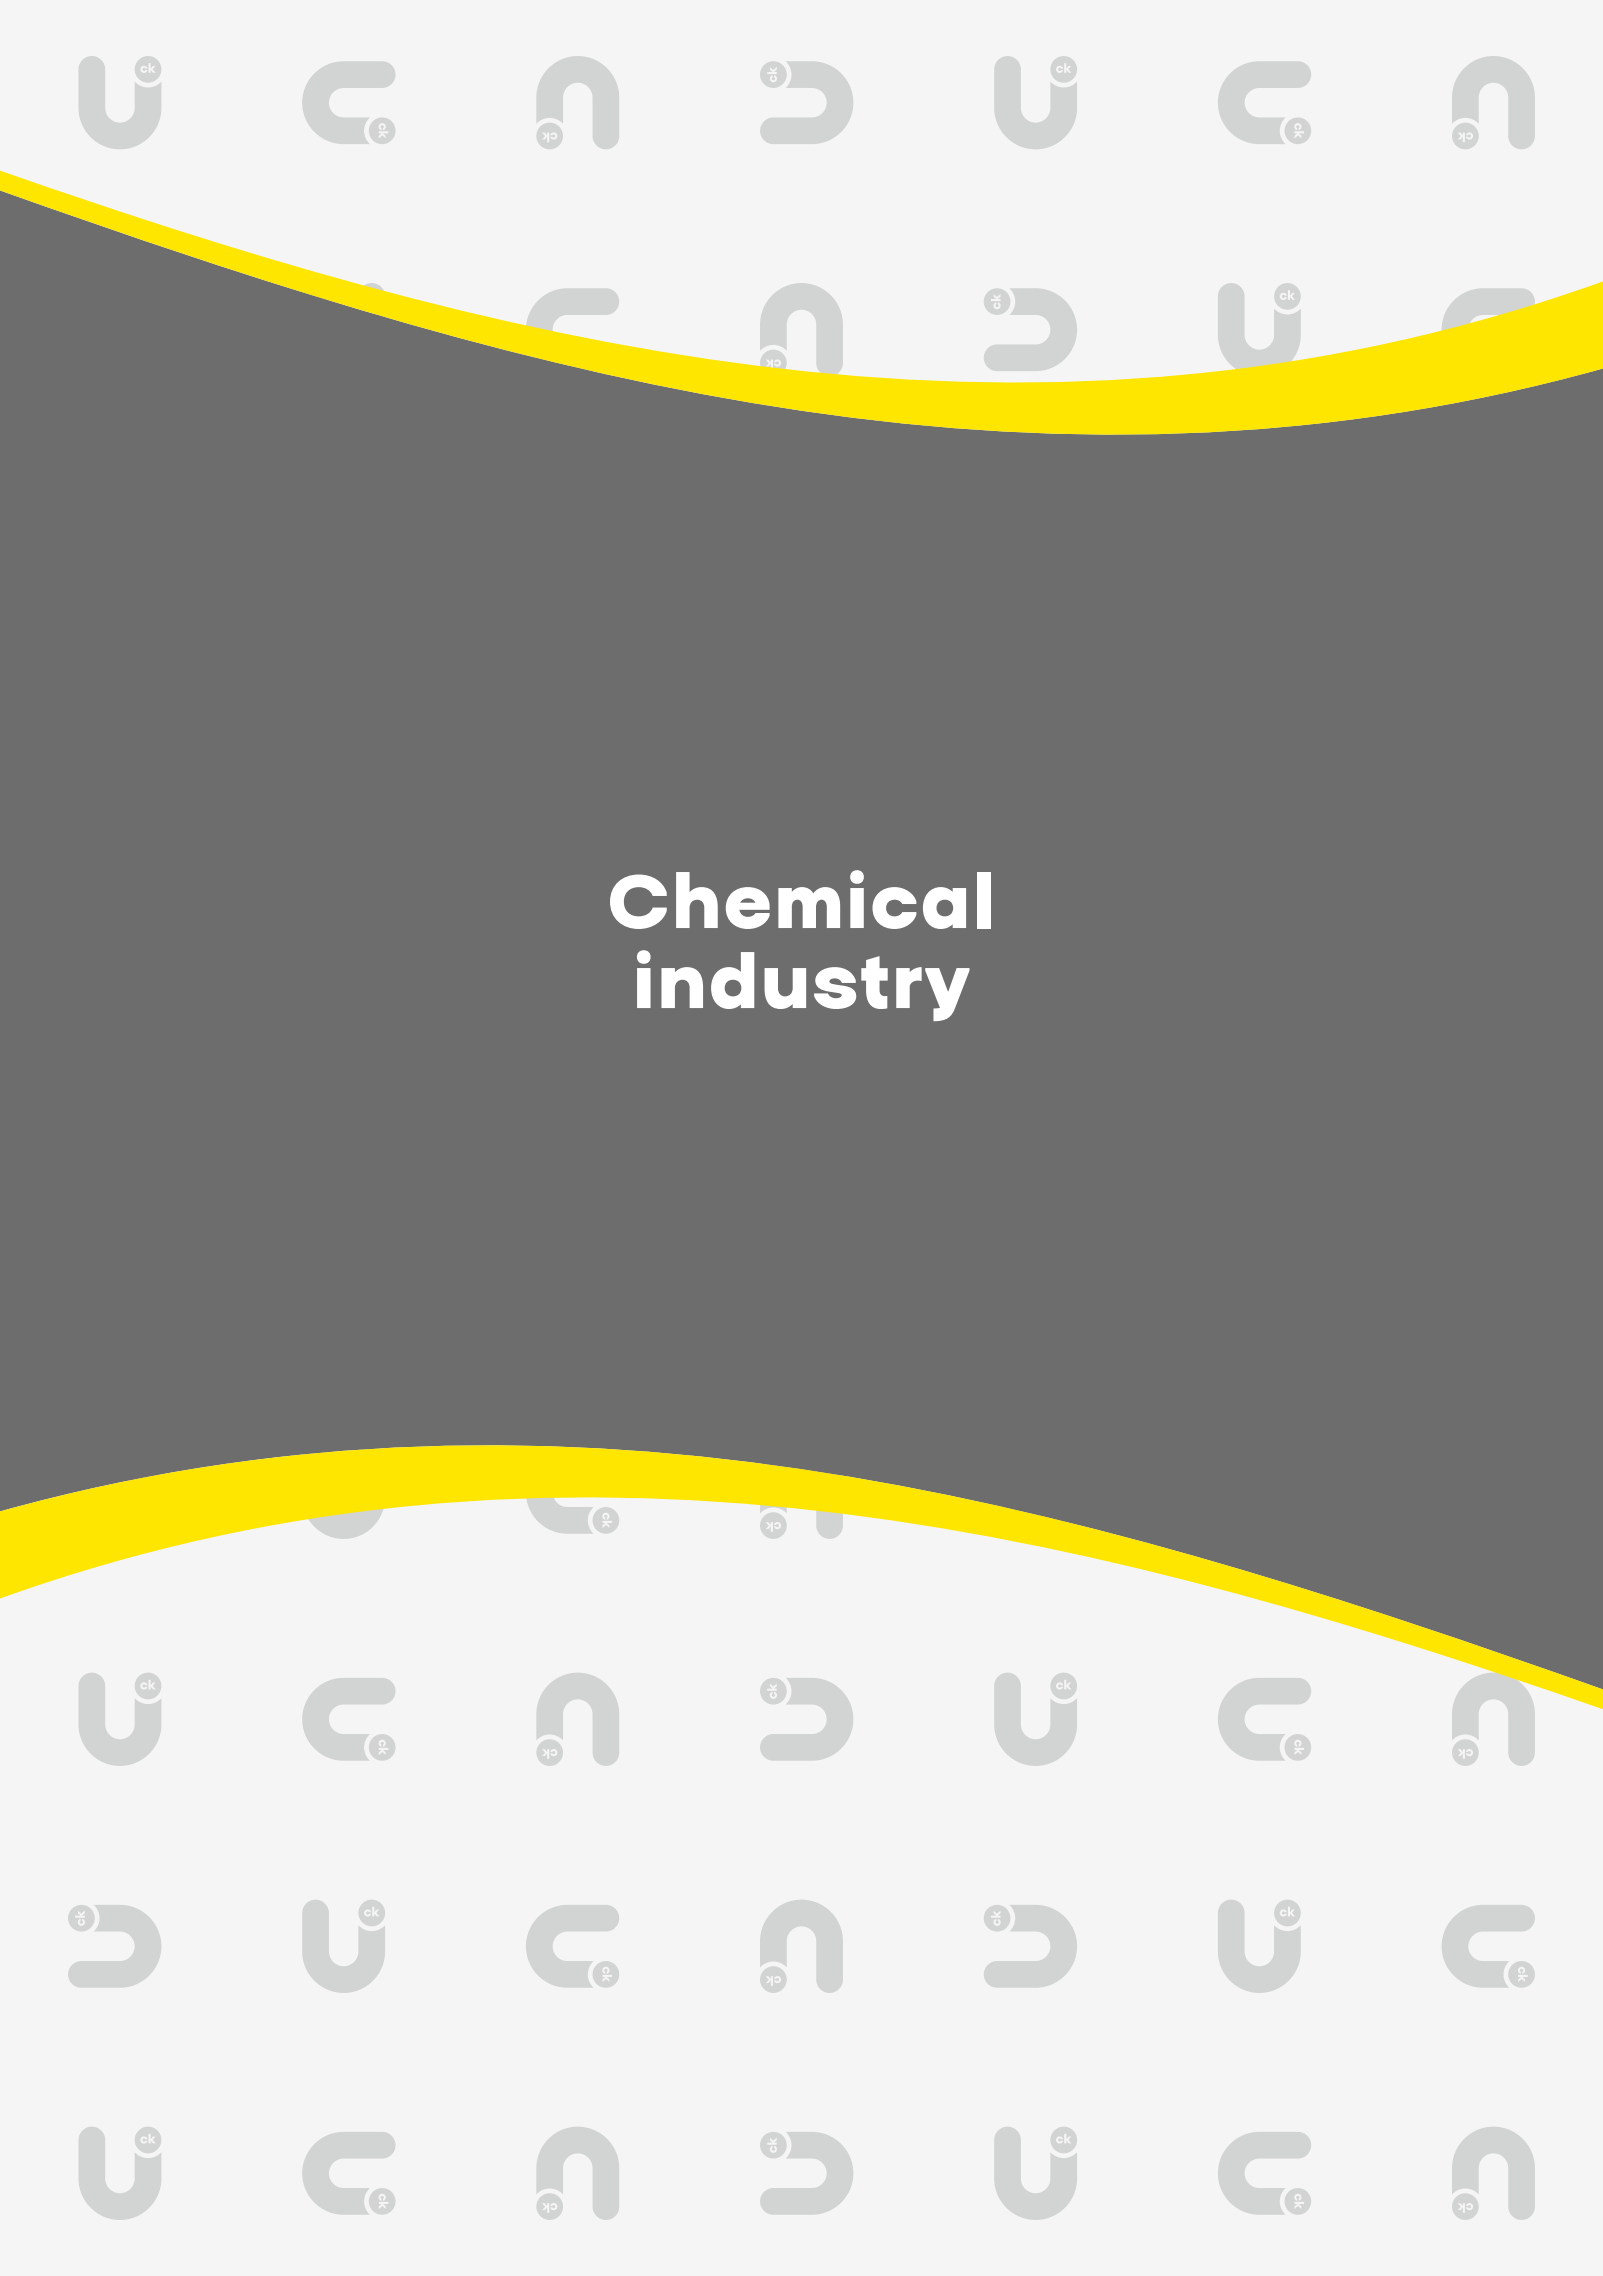

On its land plots with the total area of 1000 ha the company grows grain and technical crops: wheat, barley, sunflower, corn (for both silage and grain), as well as different types of annual and perennial grass. The high results in plant growing are achieved thanks to modern technologies and constant renovation of agricultural machinery used by the company, which includes high-powered tractors and modern grain harvesters.

The enterprise's livestock sector includes both dairy and meat cattle breeding. The company has nearly 1000 cattle heads. Over 10 tons of premium, extra-grade milk are produced by the enterprise daily and supplied to Private JSC "Lactalis-Mykolaiv" and LLC "Moshuriv cannery". The Private agricultural enterprise "Lider" was awarded within the framework of the Ukrainian-Swiss project "Raw Milk Control Program" for the high quality of the company's milk.

The enterprise is developing beef cattle farming by breeding Aberdeen Angus cattle. Each year over 100 tons of cattle are supplied to processing enterprises.

Ukravit is a leading Ukrainian manufacturer of plant protection products and microfertilizers. It has been operating on the market for 24 years.

Production facilities are located in Cherkasy.

The company is certified according to ISO 9001, 14001, 45001.

The company produces 178 original agricultural products.

The distribution network consists of 19 regional offices, and Ukravit's products are currently used to cultivate more than 10 million hectares of agricultural land in Ukraine.

In addition to plant protection products and micronutrient fertilizers, the company supplies seed and provides comprehensive service to each agricultural enterprise.

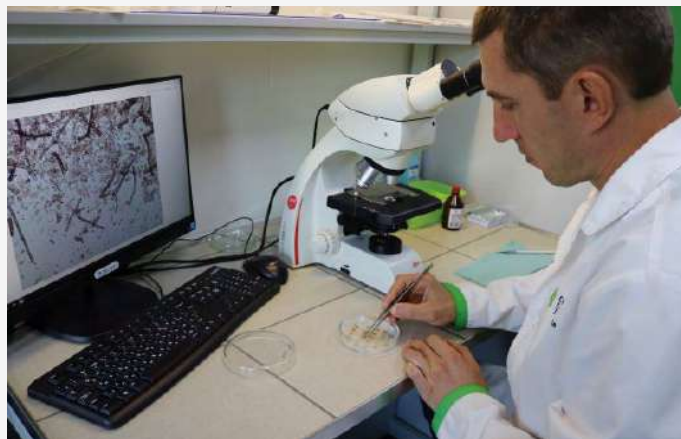

Ukravit produces its own packaging and ensures that it is collected after use for further recycling.

Plant protection products are exported to several countries (Georgia, Armenia, Moldova).

Ukravit has its own unique R&D center (Cherkasy), which combines educational and scientific work, fundamental industry research, and agrobiological services for farmers.

It is a powerful laboratory complex that includes 2,5 thousand m² of laboratories, phytotron rooms, climate chambers and greenhouses, and modern world-class equipment. It is accredited by DSTU ISO/IEC 17025.

An important area of Ukravit's work is partnership lending programs for Ukrainian farmers with leading banks and cooperation with USAID AGRO.

Private JSC "EKO-Azot" was put into operation in 2003 in Cherkasy. Now the enterprise produces granulated organic and mineral fertilizers under the trade mark "Agrolife". This is the only production plant in Ukraine which is working on original production equipment and using unique American production technology "HARMONY".

"EKO-Azot" specializes in production of fertilizers which are technologically based on compost produced from chicken litter by aerobic bio fermentation.

The special feature of organo-mineral fertilizers "Agrolife" is that they consist of the compounds of rapidly dissolving nitrogen, phosphorus, potassium, and up to 85% of organic materials. Moreover, these nutrients are very quickly soluble. Organic components of "Agrolife" fertilizers improve soils very much, and due to their extended impact and long-term efficiency these fertilizers increase crop capacity by 30-50%, and make plants more resistant to diseases.

"Agrolife" fertilizers provide plants with necessary number of nutrients as these fertilizers contain the following mostly all needed micro and macro elements in required balanced ratio: calcium (CaO), zinc (Zn), manganese (Mn), molybdenum (Mo), bora (B), magnesium (MgO), cuprum (Cu), cobalt (Co).

Research and production center LLC "Cherkasybiozakhyst" is one of the most powerful enterprises that has been successfully operating in the Ukrainian market of biological plant protection products for 50 years. The company was established in 1967. Their main goal is to substantially improve modern farming by its active "biologization" and to reduce the use of pesticides with the help of alternative biological products usage.

Currently, Cherkasy region is the only Ukrainian region where the system of production and usage of biological plant protection products exists. This system consists of 17 district biolaboratories and a regional biological-manufacturing plant. The company's products are used in 18 Ukrainian regions in the area of more than 500 000 hectares. The enterprise is proud of its team of specialists as they produce a line of biological products, consult and provide service in the sphere of biological protection in order to improve crop yields.

Short description of the company's products:

Biopharmaceuticals against pests — natural and highly effective products that help to protect crops from pests and to avoid the use of dangerous chemicals.

Biopharmaceuticals against diseases — ecologically safe plant protection products which are used to prevent and treat a wide range of diseases based on the principles of organic farming.

Stimulators of plant growth — these products are of natural origin and it allows to provide a balanced nutrition of plants, strengthen immunity and resistance to severe weather conditions. The products of the research and production center LLC "Cherkasybiozakhyst" are certified by LLC "Organic Standard", which is the only Ukrainian certification body for organic products. The enterprise encourages farmers around the world to choose organic farming.

The "Yuria-Pharm" Ltd. is a Ukrainian pharmaceutical group of companies, which keeps a course on the world market. It has been founded in 1990. In 1998 the manufacturing facilities were placed in Cherkasy.

The "Yuria-Pharm" Ltd. in Ukraine:

The hospital distributor No. 1 (the share of the market — 11,9%)**.

The No. 3 company, according to the trade turnover among the national and foreign pharmaceutical companies*.

Has over 600 registration certificates of the medicinal products and the products of medicinal purposes. It annually produces over 20 new medicinal products.

Conducts its economic activity in 41+ countries of the world. The share of exports is 25%.

The manufacturing site in Cherkasy is the largest, when we talk about the size, among the pharmaceutical enterprises in Ukraine:

- 41 manufacturing lines;
- over 25 thousand m² of the manufacturing area;
- manufacturing capacity is over 290 million product units per year, among them: medicinal products (204 million), products of medicinal purpose (over 86 million).

The total number of the company's employees is 2800. Over 1300 of these employees work at the enterprise in Cherkasy.

Machinery

 **InterCargoTruck®**

LLC "InterCargoTruck" is a leading company on the truck construction market of Ukraine. It was founded in 2010 and has its own production technology. Product quality competes with leading European manufacturers.

The quality management policy has been introduced in the company, which is confirmed by the certificate ISO 9001:2015 "Design, development, production, technical service and repairing of vans and bodies on truck chassis".

Leading national logistics companies, network supermarkets, meat processing plants, pharmaceutical companies, mining companies etc. are using company's products.

The company cooperates with leading global and national truck chassis suppliers — Mercedes-Benz, MAN, Volvo, Scania, DAF, Iveco, Renault, Isuzu, Hyundai, Citroen, Ford, Daewoo, Jac etc.

Types of products:

- refrigerated, isothermal and industrial goods vans;
- mobile shops, vans for transporting meat carcasses, day-old chicks;
- BDF containers (industrial and refrigerated);
- canvas truck bodies;
- shift vans for transportation watch personnel;
- special workshops, fully autonomous and equipped;
- mobile medical cabinets and mobile laboratories;
- mobile offices for providing banking services;
- campers.

The compliance of the production technology concerning thermal conductivity is confirmed by ATP certificates of FNA and FRC class.

The company manufactures both serial products as well as designs and manufactures products according to individual designs of different complexity.

The products of LLC "Alpha-Filter" have been known on the market since 1997.

The company specializes in manufacturing of filters and filter elements for cars and trucks, agricultural machinery and special equipment.

The company's products range includes more than 1000 items.

The company can produce air and cabin filters according to the customer's technical specifications.

The company's products are supplied to more than 20 different countries, including the United Kingdom, Germany, Austria, Poland, France, Hungary, Serbia, Macedonia, Albania, Romania, Bulgaria, CIS and the Middle East countries.

LLC "Alpha-Filter" constantly participates in international exhibitions: "Automechanika" (Frankfurt), "EQUIP AUTO" (Paris), "Automechanika" (Dubai), Kyiv international car showroom "SIAAuto Tech Service".

The use of high-quality materials, supplied by the leading manufacturers of the world, sealing pieces and structural materials manufactured in the EU, Ukraine, China, in combination with robotic lines guarantee the manufacturing of products that meet the best world standards. The quality of products is also confirmed by independent testing laboratories.

Multi-stage quality control over the manufacturing process, continuous improvement of technology and minimization of non-production costs are the basic principles of the "Alpha-Filter" company.

The plant was founded in 2015.

It manufactures industrial boilers of such types:

- NIISTU-5;
- BURAN EXTRA with the capacity of 99 up to 1000 kW;
- transportable modular boiler houses KTM with the capacity of 99 up to 1000 kW;
- general boilers BURAN-mini;
- boilers of long combustion BURAN with the capacity of 10 up to 50 kW.

LLC "Dzenzelivskyi kotlobudivelnyi zavod" has modern facilities and resources, regulatory documents, certificates and permits, necessary for manufacturing of the high-quality boilers. The quality of products is confirmed by the ISO 9001-2015 certificate.

All products of the plant are certified and have significant differences from the similar ones of other manufacturers. This is proved by the utility model patents in Ukraine.

In order to overcome the COVID-19 pandemic, the plant's engineers have developed and launched into serial production a disinfection frame RD-5.0 for treating people's outerwear.

The company also manufactures charcoal in industrial volumes. The company's products are supplied to the markets of Ukraine and Moldova.

The company was founded in 2016. It manufactures:

- special and commercial trucks on the basis of domestic and foreign chassis;
- vans of any purpose on the domestic and foreign cars chassis, which also can be manufactured by individual orders;
- municipal machinery and municipal cars, as well as special equipment for the construction industry;
- carbodies of grain trucks, dump trucks, timber trucks, etc.;
- modular buildings and temporary structures;
- spare parts and components.

The company specializes in manufacturing, re-equipment, technical equipping, current and capital repairing, service maintenance of commercial and special cars and special equipment for various purposes.

The company has created an engineering and design bureau, which meets the individual customer's needs in the field of superstructures for car chassis, trailers and semi-trailers. Engineering development is carried out, taking into consideration state standards and norms, which is confirmed by the successful completion of state certification and registration of products, in accordance with current legislation of Ukraine.

ARAMIS | INNOVATIVE TECHNOLOGIES

ARAMIS Laser Systems is a company that specializes in the development, manufacture and maintenance of precision laser systems for metal processing.

ARAMIS Laser Systems keeps in compliance with international quality management standards ISO 9001: 2015, all products manufactured at the enterprise are certified in accordance with the norms of the European Union and have a CE certificate.

The ARAMIS Laser Systems group of companies was founded in 1996 as a manufacturer of precision motion systems — linear actuator.

After the appearance of fiber laser sources, ARAMIS Laser Systems began production of innovative laser systems on the basis of linear motors and its own software. Such combination of technologies made it possible to launch the manufacture of high-precision and high-speed metal processing machines.

For today ARAMIS Laser Systems is a comprehensive supplier of equipment for material processing, namely:

- fiber laser cutting machines for sheet metal and pipes;
- CO2 laser machines for cutting and engraving non-metals;
- fiber laser engraving machines;
- fiber laser welding tools;
- complexes for laser cleaning of metals;
- press brakes, etc.

The innovative equipment of ARAMIS LLC is successfully used at more than 300 enterprises which are situated both in Ukraine and in the EU countries.

Science and Engineering Center Scaner LLC is an enterprise engaged in development and serial production, implementation and maintenance of optical medical equipment, guided by the quality management system in accordance with the international standard EN ISO 13485:2016.

Having many years of experience in gynecology and surgery equipment development, the Science and Engineering Center Scaner has a leading position in these areas in Ukraine and CIS countries.

Microscope MD-500 is designed for optical increase of the examination area with shade-free lighting, diagnostics and operative interventions, postoperative examinations, preparation for medical research, training in courses, with the possibility of connecting digital photo-video capturing devices. The microscope is used in microsurgery, general surgery, dentistry, otorhinolaryngology, traumatology, and others.

Colposcopes models MK-200, MK-300 are designed for optical increase of the examination area with shade-free lighting, in the course of gynecological and oncogynecological research. Because of their reliability and ease of use, these devices are in high demand by government and private medical institutions to equip the gynecology clinics.

Colposcopes can be equipped with a digital photo-video system, along with the MEDVisor-EVA software, which allows you to take snapshots of the explored area and record video clips for further analysis and diagnostics.

Surgical head loupe LNH is designed for optical enlargement of the examination area and operation with shade-free lighting, diagnostics of diseases and surgical interventions in microsurgery, general surgery, dentistry, otorhinolaryngology, traumatology, etc.

Since 2000 the company has been working as a contract manufacturer and supplier for German automotive suppliers of various levels in the field of mechatronics, cables, electronics and plastic parts. The advantage of the company is a special assembly process with a high proportion of manual labor.

The company is looking for new partners who would outsource their products. Handwork is offered in the following areas:

- assembly of blocks or units and assembly of sensors for German automotive industry,
 - production of various harnesses and cable connections for mechanical engineering and electronics,
 - production of plastic items by pressure die casting.
- There is ISO 9001 standard at the enterprise.

There are own logistics partners for loading and delivery of goods.

LLC "Kamianka machine-building plant" is a leading enterprise manufacturing pumping equipment with more than 80 years of experience. The main activity is manufacturing of pumps for chemical industry: used in the production of artificial (viscose) and synthetic (PET, polypropylene, acrylic, polyester, etc.) threads and fibers; dosage of polyurethane, glue, paint, pharmaceuticals etc.

The enterprise also manufactures pumps and plant units for pumping oil and petroleum by-products which are used in mining, petrochemical, refining and other industries.

The production base is equipped with high-precision equipment and has its own foundry, heat-treating and temperature-controlled shop for precise metalworking, laboratory and testing facilities.

The foundry production of the enterprise has a highly productive equipment that allows to produce steel and cast-iron foundry. The enterprise provides services for thermal treatment of parts in a vacuum kiln with a gas hardening system, hardening in salt baths.

Today "Kamianka machine-building plant" produces more than 50 types of pumps and accepts individual orders, including foundry and heat-treating.

LLC "Smila Foundry Plant" is a modern rapidly developing enterprise, that uses new technologies and modern equipment for manufacturing casting products made of low-alloy, high-strength and high wear resistance steel and made of cast-iron and aluminium. The principal aim of the plant is to reach a maximum quality in a minimum term.

Typical products which are manufactured by enterprise are feeders belts 1-15, 1-18, 1-24, 2-12, 2-15, 2-18, 2-24, belts for foreign feeders (KupolProect, etc.), blades units and blades of various assembled structures.

LLC "Smila Foundry Plant" also produces spare parts for mining equipment, such as: sieve for screens of hot screening, furnace bars, repair parts to the mill equipment, gratings sectors, etc. by your drawing.

LLC "NVS Telematics Systems" has been operating on the satellite navigation market for more than 13 years. The company is one of the leading Ukrainian enterprises for the development and production of GPS/GLONASS equipment and technologies for the needs of transport, agriculture, etc.

Main activities of the company:

- development, manufacture, sale of satellite navigation equipment;
- conducting research and development in the field of GNSS;
- implementation of scientific research and experimental design work of any subject for customers.

The core of the company is made up of highly skilled professionals with more than 15 years of experience in the business of creating navigation equipment. The company is constantly working on creating promising technologies and technical solutions.

Own original technical and system solutions, modern hardware and software tools for designing, manufacturing and testing, as well as production capacities and quality control system, allows the company to present a modern high-quality satellite navigation equipment to its customers:

- GPS/GLONASS/SBAS navigation receivers (ASN-5201, ASN-5203) and software for parallel driving systems of agricultural machinery;
- equipment of differential DGPS/DGLONASS for precision navigation;
- technological equipment for simulating GNSS signals;
- time synchronization equipment for communication networks;
- satellite angle gauges;
- antenna devices.

Private research and production enterprise "Polytechnic" was founded in 1988 and since then its focus area has been development and introduction of knowledge-intensive technics and high-tech solutions. One of the important areas of activity of the abovementioned enterprise is the development and production of Gross Weigh Scales DVSV for powder products and materials packaging. DVSV dispensers are leaders among other mechanical dispensers because of the highest accuracy class (0.1) and their productive capacity (up to 20 tons per hour). The use of DVSV dispensers in the process of packaging excludes the human factor, it means that an operator is not responsible for the accuracy of dosing.

Gross Weigh Scales DVSV is good for packing from 0,25 kg to 100 kg of powder products into bags, packages and opened containers. The mechanical weighing type dispenser does not use electric current or compressed air. The DVSV dispenser is used for packaging of powder products such as sugar, grain, cereals, seeds, rice, coffee, chemicals, and granulated materials.

The company ASCOM was created in 2011 to provide cost-effective solutions for industrial automation. As a result of continuous innovation the company has become a supplier of control systems for online monitoring and process control in many spheres of production. In the process of production analysis it turned to be possible to establish the production of devices which can be used in various areas of industry and even in daily life. Our experience is aimed at supporting efficiency and quality and this results in reduction of the production cost and high competitiveness of our products in the world market. Our philosophy is based on system integration.

The company uses measurement and production control experience combined with the latest industrial software products, so the solutions we offer provide the highest return on investment for your company.

Since 2002 in Ukrainian market there have been products presented and manufactured under the trade mark "Voskhod". Agricultural machinery is produced under this brand:

- cultivators;
- harrows;
- deep loosening outfits;
- roller machines.

The priority point in the strategy of production of agricultural machinery, machines and equipment under TM "Voskhod" is the standard of the European manufacturer.

Experience in the market of rolled metal and agricultural machinery, using of innovative technologies, investigation of demand and implementation of perspective areas of development, allow to ensure the full cycle of its own production, and as a result — production of reliable, high quality and moderate agricultural machinery of the European level.

Having purchased the equipment of TM "Voskhod" you will get:

- Professional maintenance of agricultural machinery and equipment.
- Regular updating of the model range of equipment.
- Original spare parts for agricultural machinery at the best proportion of price — quality.
- Manufacturing of special agricultural machinery.

Agricultural machinery of TM "Voskhod" is able to meet the needs of the most demanding customer!

Together we can find the most comfortable for you scheme of purchase, delivery and maintenance of equipment.

Research and production enterprise "Mekhanotron" manufactures weight-batching equipment for weighing and packing of the products since 1991. These products include:

- powder products (sugar, grain, cereals, seeds, salt, compound animal feeding stuff, granulated materials etc.);
- liquid products (oil, syrup, etc.).

Weight-batching equipment produced by this company is used on more than 500 enterprises of Azerbaijan, Georgia, Kazakhstan, Kirghizia, Latvia, Lithuania, Moldova, Poland, Romania, Türkiye, Uzbekistan and Ukraine.

Weight hoppers of Norma-S and Norma-SL production batch are used for monitoring (calculation and indication) of the number of filled sacks (bags) since the time indicated by an operator and they also show the weight of the products. Thanks to block-modular construction the equipment is easy to use and maintain. Moreover, the expenses on this equipment are quickly compensated because of the high accuracy of batching that the specified equipment provides as well as exclusion of a human factor's influence on the process of packaging.

For Norma-S and Norma-SL weight hoppers models there is a possibility of installation of an additional counter for monitoring the total number of sacks which have already been filled.

Research and production enterprise "Mekhanotron" also offers hopper-type scales which provide static weighing and total accountance of any powder products. Hopper-type scales can be used in different industry branches and their weighing error is only 0,1%.

Main characteristics of hopper-type scales:

- the ability to transfer data from the scales to a remote computer;
- the block-modular construction, which simplifies maintenance and operation of the equipment;
- the ability to remotely control the level of performance and volume of product doses;
- the construction determines the weight of the product in a continuous stream from the conveyor or in the process of selection of the storage bin;
- the selection of the necessary quantity of product (with packaging into flexible intermediate bulk containers or with shipping into vehicles).

The LLC "ORYZON-NAVIGATION" (a member of the JSC "UKRAINIAN DEFENSE INDUSTRY") is a recognized in Ukraine leader in production of satellite navigation equipment in the GNSS systems (GPS/GALILEO/BeiDou/GLONASS/SBAS).

The enterprise manufactures such GNSS equipment:

- navigational parameters sensors;
- avionic equipment for planes and helicopters;
- navigation equipment for sea and land bases which can be used in severe operating conditions.

All equipment is certified.

Information on navigation equipment:

For civil aircrafts:

- CH-4312-02 is equipment for flight navigation for civil aircrafts.

Safety devices for railway rolling stock:

- CH-PKPM is a device for driver's vigilance control;
- CH-143/159L is a light alarm box that provides periodic locomotive driver's vigilance control;

- CH-168L provides power failure in case a locomotive exceeds minimal speed limit;

- CH-116L is a device that allows postponing periodic locomotive driver's vigilance control;

- CH-77L is a device that provides periodic locomotive driver's vigilance control by the light of the signal lamp.

Testing units:

- a testing unit for control of safety devices, such as: CH-143/159L, CH-168L, CH-116L, CH-77L;

- an automatic testing unit CH-SAP for testing CH-PKPM control devices.

Time synchronization device:

- CH-3841M is an autonomous device for time synchronization.

LLC "NVK "PROMFARM" (TM PROMVIT) is a machine-engineering plant that has been working since 1995 and has been producing industrial technological equipment from stainless steel.

The company produces capacitive equipment for cosmetic, food, veterinary and chemical industries, namely:

- reactors for the preparation of liquid, soft and solid medicinal forms (creams, ointments, gels, pastes);
- laboratory reactors are designed to make various chemical and physical processes: dispersion, emulsification, homogenization, dissolution, production of emulsions and suspensions in laboratory conditions;
- fermenters, bioreactors, notch filters, transport containers, mixers, dispensers, homogenizers, filling and corking lines.

The goods have GMP, SCADA, compliance with Directive 2009/105/EU (SPV).

The company provides customers with a package of IQ-OQ documents depending on the needs of the client.

The team has significant experience in many fields, starting from the design and manufacture of reactors and ending with FAT factory testing.

JSC "CHERKASY BUS" is one of the leading enterprises in the Ukrainian automotive industry in manufacturing of buses and trucks. The company was founded in 1964.

It manufactures products under the ATAMAN trademark that meets all the requirements of international standards adopted in Ukraine and is able to meet the maximum needs of transport consumers for the transportation of passengers and goods.

The company manufactures the following vehicles:

- ATAMAN city, intercity, specialized school buses (including those for transporting students with disabilities), special and specialized buses for the needs of civil and state structures;
- trucks based on ISUZU chassis with flatbed platforms, tilt vans, industrial vans, isothermal vans, refrigerator vans, tankers, dump trucks, garbage trucks, special and specialized vehicles.
- ISUZU D-MAX pick-up trucks.

For more than 20 years JSC "CHERKASY BUS" has been cooperating with the world-famous ISUZU Motors LTD (Japan). Buses and trucks manufactured by Cherkasy Bus are assembled using ISUZU units and other components from domestic and foreign manufacturers.

The design and technology of buses and trucks are constantly being improved, and measures are being taken to reduce labour intensity, reduce costs and improve products quality. In JSC "CHERKASY BUS" there is a quality management system ISO 9001:2015, which is certified in accordance with international and national standards.

Private company "FOTONICA PLUS" has been specializing in laser optical instrumentation for more than 28 years. The main activity is the development and production of medical and veterinary laser equipment for surgery and physiotherapy, as well as optical fiber-based instruments for it. The company has been operating in accordance with the quality management system approved by the international standard ISO 13485:2016.

The company ensures a full scientific and engineering cycle – from the idea to its practical implementation. New technologies are developed in close cooperation with leading clinical and scientific institutions of Ukraine. The company has its own service and repairing center for laser equipment and its peripherals. Conformity control of medical devices and other equipment is carried out by a certified technical control laboratory.

The company produces:

- surgical diode lasers "LIKA-surgeon+" and "LIKA-surgeon", which are designed to make a wide range of surgical procedures;
- the LIKA-fraxel+ fractional CO₂ laser is a universal tool for dermatology and cosmetology, surgery and gynecology;
- laser Therapeutic Apparatus "Lika-therapist M" is a portable device for laser procedures in the visible and infrared spectral ranges;
- medik-2K is a two-channel laser scanning device designed for laser therapy procedures by scanning, using red and infrared radiation;
- new generation of veterinary Surgical diode lasers "LIKA-surgeon", which have been successfully certified according to the international CB-certification system and designed to perform a wide range of surgical procedures.

Scientific and production company “Aeromeh” Ltd. is a company specializing in next-generation grain cleaning equipment. It manufactures self-propelled grain cleaning complexes, mobile seed stations, and designs turnkey grain cleaning lines.

Since 2001, the company has developed and patented a unique solution for farmers – SAD aerodynamic separators. The SAD aerodynamic separator, the company’s flagship product, operates on a technology that separates grain in an air stream based on specific gravity. Unlike traditional methods, this system ensures ultra-precise cleaning and calibration, improving germination and yield with minimal costs.

The entire production process, from metal cutting, bending, welding, painting, to final equipment assembly, is carried out in-house. This allows us to maintain full quality control, ensure precision, and offer customized solutions for clients around the world.

Originally founded in Luhansk city, Scientific and production company “Aeromeh” Ltd. was forced to relocate twice due to the war – first in 2014 to Kremynna city, where its production was renewed and expanded, and again in 2022 to Cherkasy region. Despite these challenges, the team didn’t give up. Thanks to our spirit, resilience, and dedication, the company preserved its potential and entered a new stage of development.

Today the company’s equipment is exported to nearly 60 countries worldwide – from Europe to North America, Asia and Australia.

LESIA

It has been a Ukrainian manufacturer of women's clothes since 1937. The company has its own large-scale production facilities and 50 branded shops and representative offices in different cities of Ukraine and abroad. The team of designers offers to buyers exclusive models of women's gowns under the trade mark LESIA, taking into consideration the latest world fashion trends. The company participates in Ukrainian and international fashion shows. Every year TM LESIA creates 4 fashion collections of clothes: spring, summer, autumn-winter, special occasion.

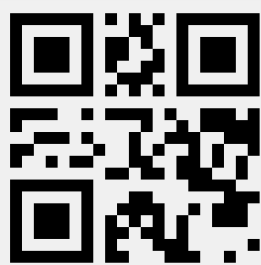

During clothes manufacturing special attention is paid to high-quality fabrics and accessories.

TM LESIA is interested in the active development of a network of its own brand stores. Its rich and versatile assortment of clothes allows an effective packing of the trade matrix of business on a turn-key basis. It provides LookBook of capsule collections for each season and recommendations on the balanced filling of its stores.

Collections for exports are represented in several styles:

- classic — elegant classic clothes for business women or women who prefer concise and restrained looks;
- romantic — clothes that reveals femininity and elegance, these are light as air gowns that emphasize sensuality;
- glamor — bright and charismatic looks for special occasions that attract attention and reveal female beauty;
- casual — actual casual style with fashionable design elements, which emphasizes the sense of style and desire for comfort.

While creating a new collection, the designers of TM LESIA consider the fashion trends, colours and prints of the upcoming season. They visit international fashion shows in Milan, Paris and Berlin.

Furniture

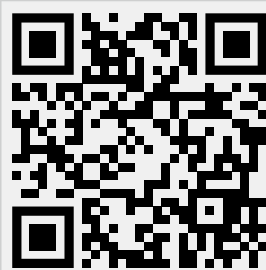

The furniture factory LIVS is one of the leaders in the production of furniture in the Ukrainian market. For more than 20 years we have been manufacturing furniture for you, creating comfort in your homes.

The goal of the company is to make our buyers satisfied with the production. We do not lag behind world standards and keep pace with the world's technologies and tendencies. Our furniture attracts buyers with a great sense of taste. The awards and appreciation of famous designers at major exhibitions serve as a confirmation of our success. According to the statistics, 70% of our customers come again, moreover, they advise us to their friends and acquaintances. High quality and trust in our company helped us to create one of the largest retail chains in Ukraine.

The furniture factory LIVS produces a whole range of various furniture products. You can distinguish 3 main areas among them: upholstered furniture, cabinet furniture and carved furniture.

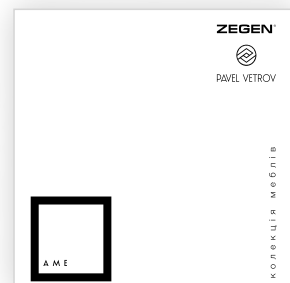

The assortment includes about 500 items of different collections and stylistic solutions. The most fashionable trends, the use of modern technology, the careful selection of accessories, most of which are procured in Europe, a multi-stage quality control system — all this makes it possible to create furniture that will impress the most demanding buyer.

LLC "Ukrlispartnership" is a joint Ukrainian-Chinese enterprise which has a great experience in sorting and purchasing of hardwood and softwood timber (oak, maple, ash, etc.) and in triple quality control at each stage of lamella and veneer sheets manufacturing.

With confidence they offer to their customers only high quality veneer sheets and lamella, which are used in different spheres of wood processing, starting from facing of surfaces or manufacturing of components and ending with its usage for the parquet and laminate production.

For the lamella and veneer sheets production "Ukrlispartnership" uses roundwood assortments of such species of wood as oak, maple, ash, hornbeam and others.

Manufacturing of veneer sheets and lamella is carried out by slicing dimension parts — saw timbers. For the production of lamella and veneer sheets the company uses the first and the second-best raw materials.

The dimension parts are hydrothermally treated in order to increase plasticity of the wood when cutting it. Time, which dimension parts spend in water, depends on the wood species and the desired thickness of veneer sheets and lamella.

In horizontal scheme of slicing, the cutting movement is performed with a knife in the horizontal plane at an angle to the fibers to reduce the cutting force. Veneer sheets and lamella are desiccated with the help of special vacuum drying equipment.

Private company "Spetstechprom SIG" for over 25 years has been manufacturing equipment that supports daily operations in factories, workshops, laboratories, and medical institutions.

The company's main production areas:

- industrial chairs and stools under the trademark "Promstul", designed for everyday intensive use in factories, workshops, laboratories, and healthcare facilities;
- sewing trolleys for storing, transportation, and organizing production processes.

"Promstul" industrial chairs offer:

- a fully metal frame that supports up to 150 kg;
- spring-loaded and screw height adjustment mechanisms, which are significantly more durable than gas lifts with guarantee at least 10 years;
- a fixed, non-adjustable backrest that provides exceptional stability and reliability, eliminating the risk of breakage;
- certified by the State Sanitary and Epidemiological Expertise, making them safe for use in healthcare facilities, laboratories, factories and workshops.

Sewing trolleys:

Sewing carts frames are made of steel profile pipe frame with powder coating, providing excellent resistance to mechanical stress and durability in daily industrial use.

They are suitable for transporting and storing cut parts, semi-finished, and finished products. The number of shelves, dimensions, and configurations are tailored to the needs of sewing enterprises.

All company's products, thanks to their reliable and well-thought-out construction, withstand heavy loads, serve for years and prove their quality daily in real production conditions.

Woodworking industry

LLC "KORIS "AM" has been one of the largest producers and an exporter of solid and double-layer natural wood flooring in Ukraine for about 20 years and it has a certificate of the Forest Stewardship Council (FSC) — an international organization established to support environmentally acceptable, socially beneficial and economically viable management of the world's forests.

Enterprise uses modern high-tech equipment and quality control system, which has been certified for compliance with European standards. Its priority is to improve range of goods, flexibility of orders execution and raise products quality level.

Some of our products:

1. Massive oak floor board with oil-wax coating (or uncoated) with addition of white, grey, brown pigments with the sizes: 20 x 140/160/180 x 600-2080mm.

2. Multi floor (two-layered laminated oak flooring) with oil-wax coating (or uncoated) with addition of white, grey, brown pigments with the brushing effect (effect of artificial aging) or without it. It's sizes: 16 x 140/180/200/220 x 600-2080mm; 20 x 140/180/200/220 x 600-2080mm; 20 x 250/300 x 1050-3000mm. The top layer of the multi floor is oak lamellae, the bottom layer is high-quality environmentally friendly moisture-resistant FSF plywood.

Galen 1 LLC

Fire starters & Wooden boards

The LLC "Galen 1" was founded in 2000 and from the very beginning specialized in deep wood processing, producing high-quality oak parquet. The main sales market was the USA, but products were also supplied to the UK, Germany, Denmark, the Netherlands and France.

In 2014, the company expanded production by launching the production of two types of furniture panels. The main sales markets are Germany, Great Britain, Poland, and Estonia.

Since 2021 the company has reached a new level by starting the production of high-quality fire starters for bonfires, fireplaces and barbecues (timber wool). The manufacturing technology has been improved and the quality of the products has been brought to a premium level. The main sales market is the USA, but production has great potential for expansion. Now the company is actively working on entering the EU market.

In 2024 the company installed equipment for the production of high-quality premium kitchen boards.

Building industry

MANEZH is an innovative leader in the development and production of sun protection systems for hotel terraces, cafes, bars, restaurants, private houses, outdoor areas and building facades.

The company's products create a comfortable microclimate, reducing the impact of solar energy and allowing effective control of room lighting.

MANEZH offers:

Individual and typical covering solutions for:

- terraces and spaces — pergolas (sliding canopies), sunshade awnings;
- closing of facades — external fabric blinds, facade blinds, systems for winter gardens;
- internal protection from the sun — blinds, shutters, curtains.

The company supports the trends of energy efficiency, environmental friendliness, thrifty production and "Made in Ukraine".

Since 2015 the company has been a developer of its own line of pergolas under the M-OCEAN brand, and since 2019 — a line of standard LITE terrace solutions. The company has been implementing more than 3 000 projects in Ukraine and abroad during 28 years.

Advantages:

- own production;
- excellent reputation, experience of work in this sphere;
- the engineering department, which, except typical solutions, provides an opportunity to implement individual projects;
- service: support of projects from an idea to installation and maintenance in Ukraine and abroad exclusively by its own assembly brigades;
- a wide range of products in different price segments;
- valid DSTU ISO 9001:2015 quality management system.

Besides this, the company has been training entrepreneurs and managers of other companies in KAIZEN system for more than 10 years.

Decomax is a trademark of Ukrainian polyvinyl chloride panels for walls and ceilings which has been in the market since 1998. A large experience made it possible to achieve high professionalism in the production of modern quality products.

The most important properties of polyvinyl chloride panels of TM Decomax:

- qualitative raw materials: items are made from environmentally friendly European raw materials using own high-tech equipment of world manufacturers;
- control of the quality: an independent laboratory has been established at the production facility where multi-stage product quality control is done at all stages of production;
- structural rigidity: the panels have thick walls and a large number of stiffeners, which makes them extremely strong and durable;
- a wide assortment: besides monochrome polyvinyl chloride panels, there are also decors made from timber, marble and other decoration, and the width of the panels is available in 3 variants: 100 mm, 250 mm, 350 mm.

The following methods of decorating polyvinyl chloride panels are used: flexographic printing and lamination. Any interior idea with the wide range of decors TM Decomax may be realized.

TM Decomax is constantly improving, based on market needs: new technologies are studied and implemented in production, the assortment becomes larger and the quality of products is getting better.

**Processing
industry**

LLC "Cherkasyvtoresursy" has been operating on the market for more than 50 years.

The company specializes in procurement and processing of all types of polymeric raw materials.

The products manufactured by the enterprise:

- PET-flex;
- LDPE/HDPE granules;
- polyethylene film.

LLC "Cherkasyvtoresursy" is one of the Ukrainian largest companies which processes secondary raw materials.

It is a member of the Ukrainian production and environmental association "Ukrvorma".

LLC "Cherkasyvtoresursy" collects 500 tons of secondary wastes per month, not allowing them to be transported to the city waste disposal site, thus reducing the negative impact on the environment.

The company focuses on the development of foreign economic relations and is interested in increasing the exports volumes of its products.

The main contracting parties of LLC "Cherkasyvtoresursy" are enterprises from Romania, Slovakia, the Czech Republic, China.
